Online Workshop on

Systematic Problem Solving

22 January 2021 : 2.30 pm to 5.30 pm

CONTEXT

What is a Problem?

When there is a gap between our Expectations and the reality, we feel unhappy – which is a “Problem”. This is how a deviation from specification, a failure to meet time lines etc., become our problems. A problem could be defined as “the gap between our expectations and actual state or observation”. From the gap analogy, we also understand that as the gap increases, our suffering gets intensified.

This workshop is designed to cater the needs of leaders and managers who are interested in solving the recurring problems and want to bring in the culture and team-based approach of systematic problem solving to every level of people in the organisation.

The course covers important problem-solving tools like, problem definition, interim action, root cause analysis with QC tools, root cause validation using statistical tools, corrective action, escape points, poka-yoke and more.
